Dr. Carlos Collet is an interventional cardiologist and global leader in coronary imaging and physiology. He currently serves as **Director of Cardiovascular Imaging, Physiology and Translational Therapeutics** at the **Cardiovascular Research Foundation (CRF®)** in New York, where he leads efforts to integrate cutting-edge research into clinical practice and expand the organization's impact in cardiovascular innovation and education.

Dr. Collet completed his medical training and specialization in interventional cardiology at the **Dante Pazzanese Institute of Cardiology** in São Paulo, Brazil. He then pursued advanced training in **cardiac CT angiography** at **Holy Cross Hospital** in Florida, USA. He earned a **PhD in Cardiovascular Sciences** from the **University of Amsterdam**, where his research focused on the integration of coronary imaging and physiology in patients with complex coronary artery disease.

A highly productive clinical scientist, Dr. Collet has authored **over 300 peer-reviewed publications**. Before joining CRF®, he served as **co-director of the catheterization laboratory** and interventional cardiologist at the **Cardiovascular Center OLV Aalst / OLV Hospital Aalst** in Belgium. His work continues to bridge translational science, technological innovation, and education to improve outcomes for patients with coronary artery disease worldwide.
